

I am a PAYING XM Satellite Radio subscriber. I am also a truck driver, owner operated, that goes all over the country to provide services to all when the only way it comes is by truck. I depend on the traffic and weather and news for designated stops being most times I can't depend nor receive local stations to give me the most current information to achieve the time schedules for services that the public sector demands and expects. If I don't have this info, I will be endangered not only to driving the rig to but to insuring that the load gets there safely. Thank God for last night and my XM radio! I am heading to Texas from Chicago. If I didn't have XM, I wouldn't have known that a tornado was imminent. I stopped and took cover. So if you think this is not important, think about your family, what you would do to protect and the hazards on the road to insure that all have the chance to make a safe living and have the goods that come to your home via the truck drivers! Thank you very much, Gene Stadel/Stadel Trucking, Inc.
